FOR TELEVISION SIGNAL**

(57) Abstract:

PURPOSE: To obtain an autodialing control device for automatically executing dialing operation of a telephone set by means of a telephone number displayed on a TV program.

CONSTITUTION: Telephone information is superposed during the vertical blanking interval of a TV signal and transmitted by/from a broadcasting station side 1. A telephone information extracting part 26 on the receiving side 2 extracts the telephone information, a memory 28 stores the information when it is effective information, and when a viewer turns on a switch 29, a telephone line switching part 31 is connected to an NTT side line 32. At the time of dialing the telephone number stored in the memory 28, a correct and quick calling can be attained.
